

U.S. Steel Corporation

Project: Steel Doors

Owner: U.S. Steel Corporation

Architect: The Design Alliance Architects

Shannon Construction was contracted to design/build a moveable configuration to house a media center. Shannon's field personnel collaborating with the designer created steel doors. The two panels, custom designed, and fabricated; 10' x 8' sitting on a 1000 pound capacity steel roller track system; captures the essences of this world renowned corporate client. Each piece of stainless steel had been carefully cut, molded, welded and buffed into this breathtaking master piece.
